Claims objection

As to claims 6, 7, 12, 13, 17, 18, the examiner is unclear the limitation "the magnetic sensor includes a hard magnetic layer and a soft magnetic layer, and wherein the magnetization direction of the soft magnetic layer is changed depending on an induced magnetic field from the signal wire" which layer is a hard layer, which is soft layer and why is the magnetization direction of the soft magnetic layer is changed instead of the hard magnetic layer? Clarification is required.

Double patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory

Art Unit: 2829

double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

1. Claims 1, 2, 8, 9, 14, 15, 19 – 21, 25, 27, 30 - 33 provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1, 2, 5 – 7, 11, 15 – 21 of copending Application No. 10/670373. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims are still the same scope of the invention.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

It would have been obvious to one having an ordinary skill in the art at the time of the invention was made to detect resistance change or the current change to determine the voltage change based on the ohm law ($V = IR$) to know the open, short or fault in the electrical circuit. Further it is common sense to comparing the detected value with the signature value to determine the fault of the circuit.

In addition, scanning zig zag pattern is similar with scanning below a pixel line.
